Art Unit: 3637

***Priority***

The continuation information in line 1 of the specification needs to be updated (adding the patent number of the parent case therein).

***Specification***

The disclosure is objected to because of the following informalities: on page 9, line 1, "23" should be "23A". Appropriate correction is required.

***Drawings***

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the raceway/plate attached to the upper surface of the table must be shown or the feature(s) canceled from the claim(s). No new matter should be entered. (See 112 first rejection below.)

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Art Unit: 3637

Claims 42-47 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Namely, nowhere in the specification or drawings, as originally filed, is it disclosed that the raceway/plate is attachable to the upper surface of the table. In Figs.13-16 (referenced by applicant in the arguments), the plate is always attached to the bottom surface of the table.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 42-47 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 16-18 of U.S. Patent No. 6,244,193. Although the conflicting claims are not identical, they

Art Unit: 3637

are not patentably distinct from each other because both the patent and the application teach a raceway with a locking element and mounting plate attachable to a structure in one of two positions; in the first position, the raceway extends above the upper surface of the structure (see Fig. 13) and in the second position, the raceway extends beneath the lower surface of the structure (see Fig. 14). Furthermore, because of the mounting plate which extends out from the raceway, the plate/raceway of the patent would inherently be attachable to the upper surface of the structure.

### ***Response to Arguments***

It is agreed that Propst and Wolff fail to teach a raceway that is attachable to a table and extendable from either the upper or lower surfaces thereof. It is also agreed that these references fail to teach raceways that can engage either of the surfaces; however, as stated above, the application also fails to teach the latter limitation.
